

MARITIME DUFFERIN GOLD CORP.

Job Opportunity

Analytical Laboratory Analyst:

Reporting to the Chief Assayer, you will be involved in the day to day operation of a mineral processing laboratory working with classical wet chemistry, AAS, fire assay and sample prep. Supervise junior lab personnel and perform lab analysis as required to maintain timely reporting of information and ensures the accuracy and precision of data distributed to technical and operating personnel. Assist to provide training to Junior Lab personnel that supports the site's research, developmental and operational needs. Ability to multi-task within a team environment is essential as is the ability to work shifts.

Qualifications:

Bachelor of Science Degree in chemistry, analytical chemistry or chemical engineering with three to five years related analytical laboratory and supervisory experience; or equivalent combination of education and experience.

Ability to operate and maintain all analytical laboratory equipment. Perform all analytical tasks with accuracy and precision. Ability to utilize spreadsheet, word processing and database applications. Organize and prioritize work. Excellent written and oral communication skills in English.
